

## **Defense Software Repository System (DSRS) User Tool 6.06.0**

The DSRS User Tool is a client/server SUN/UNIX based application that provides registered System Administrators (sysadmin) with a mechanism to download GCCS software segments in preparation for installation using the Remote Installer and Segment Installer. Developed to make segment distribution and reuse easy, the DSRS User Tool is a user-friendly Graphical User Interface (GUI) designed to search, browse, analyze, and download user specified files for selected segment(s). The DSRS User Tools features:

### **A User Friendly Environment**

- A GUI front-end to simplify user operations
- A Structured Query Mechanism that assists users in searching for, evaluating, and extracting segments

### **Automated Search and Retrieval**

- A client/server architecture that enables users to retrieve segments from any GCCS site in the distributed heterogenous network
- Access control through assignment of group identifiers to sites, and users.

### **Open Systems Compliant**

Supports MS-Windows and SUN/UNIX environments

## **GCCS Registration Procedures for the DSRS Government Users**

Any individual who wants access to the DSRS for GCCS will have to register for an account. This is necessary as DSRS will be assessable to the GCCS community only. Individual users will request registration by obtaining a DSRS for GCCS Account Request Form from their site GCCS Information Systems Security Officer (GISSO) and filling out the form. The site GISSO will validate a users registration by signing their DSRS registration form and forwarding it to the Operational Support Facility (OSF) GISSO. The OSF GISSO will return the user ID and password to the site GISSO to be distributed to the user.

## **GCCS Registration Procedures for the DSRS Contractors**

The process is the same as above with one exception. The Government sponsor must validate their contractor's need to access DSRS. Contractors will have to be validated by the GISSO at the site from which they will be accessing GCCS.

## **GCCS Customer Assistance Office for DSRS**

After the user has been registered on DSRS their user id and any software needed to use DSRS services will be sent to the OSF GISSO who will generate the password and send this information to the site GISSO for distribution to the individual user. The site GISSOs should mail the completed DSRS for GCCS Account Request Forms to the Attention of Marty Donow, OSF GISSO, DISA/JIEO/JEJIS, 45335 Vintage Park Plaza, Sterling, VA 20166-6701
